I can't change the name because it's used by other hosts as well. How can I change the name of the Nagios Plugins in the plugins.cfg file or what is the default name for that check? Thank you!

A: I found out I could change the name in the Nagios Plugins file here: Where there's an entry like this: /usr/bin/check_nrpe -H localhost -c check_samba_ftp_ftpstatd -C localhost -t 8 -w 12345 -C ftp -v --trace The name in the context of Nagios is the same. German Truck Simulator 4.0.Transcriptional co-regulation of the genes encoding xylose reductase and xylitol dehydrogenase (xylitol metabolism) by the xylose-inducible xylose operon in Saccharomyces cerevisiae. The xylose operon contains genes coding for xylose reductase (XR) and xylitol dehydrogenase (XDH) as well as other genes that are not involved in xylitol metabolism. To study the relationships of the xylose operon genes to xylitol metabolism, we compared the xylose operon with the xylose-inducible xylose operon that encodes the xylose-utilizing gene E. coli xylF from within the xylose-utilizing xylose operon from Candida maltosa. The genes of the xylose operon were cloned on a multicopy vector and introduced into a xylose-utilizing xylose-inducible xylose operon strain of S. cerevisiae. The activities of XR and XDH were assayed spectrophotometrically. Northern and Southern analyses showed that the xylose operon and the xylose-inducible xylose operon in S. cerevisiae were controlled in a similar manner, depending on the xylose concentration in the culture medium. This indicates that they are located on a single transcriptional unit, which encodes the genes of XR and XDH (which are directly responsible for the conversion of xylose to xylitol) as well as the other genes (which are not involved in xylitol metabolism). This suggestion was supported by the following results: (1) the induction
