A, are widely used in cancer research. Here we present the evidence that HDACi prevent transformation of mouse embryo fibroblasts (MEFs) by four representative carcinogens. The results of the proliferation assay revealed that HDACi blocked cell cycle progression induced by any of the four carcinogens, including 4-nitroquinoline 1-oxide (4NQO), aflatoxin B1, N-methyl-N'-nitro-N-nitrosoguanidine (MNNG), and methyl methanesulphonate (MMS). In addition, HDACi protected cells from cell death induced by 4NQO and MNNG but not from death induced by MMS. The mechanism of cell survival promotion was associated with the inhibition of DNA damage and apoptosis induction by HDACi. Furthermore, in an anchorage-independent soft agar assay, both HDACi significantly suppressed the colony formation induced by 4NQO, MNNG and MMS. These results demonstrate that HDACi could be applied to chemoprevention in mouse models. Q: MVC3 PdfMVC I am trying to use PDFMVC but it does not work for me.
